

Green Building Practices for a Life of Energy Savings

Rockport Group is proud to offer new homes that have earned the ENERGY STAR® label. The ENERGY STAR label is your assurance that your ENERGY STAR qualified new home has been built to strict technical specifications by a licensed ENERGY STAR for New Homes builder and that it has been verified by an independent energy evaluator to ensure state-of-the-art performance. You will benefit from it in a variety of ways.

Benefits of Owning an ENERGY STAR Qualified Home

Lower cost

You will be pleased to see the monthly energy savings in an ENERGY STAR qualified new home. If you pay a mortgage, these savings will more than compensate for the additional costs for the energy-saving features of the home.

More Comfortable/Quieter Homes

The energy-efficient features of ENERGY STAR qualified new homes keep out excessive heat, cold, and noise, and help ensure consistent temperatures between and across rooms—making these homes more comfortable to live in.

Less energy expended = fewer pollutants.

Homes account for 17 percent of all energy use in Canada. As ENERGY STAR qualified homes are more energy-efficient than standard code built houses, they can help reduce air pollution and lessen other environmental problems, such as climate change.
